With its totally new design of a rapid-assembly foldable bridge, Dornier is offering a piece of equipment ideally suited to greater mobility in ground operations. The patented bridge, developed on behalf of the German Armed Forces, differs markedly in its specifications from all other previous systems. Its lightweight construction combined with exceptional strength results from our extensive know-how in aircraft design and years of experience in mobile bridging.

Of modular construction, the bridge has a span of up to 46 metres and supports loads of up to 110 tonnes. The bridge segments are carried folded on standard cross-country trucks. It automatically folds or unfolds and can be deployed by a crew of five. Requiring limited bank space, it takes a crew only one hour to make the Dornier foldable bridge operational. The bridge's 4.4-metre full road width supports heavy vehicles crossing at speeds of up to 25 km/h.

The system has given an impressive demonstration of its capabilities in tough German Armed Forces trials. Considering your future bridging requirements, keep these test results in mind.
